

THE NEXT MOVE TABLE

On 27 September 2026 Bitcoin closed the week above \$82,833, the first weekly close above the last lower high of this bear since January. Every study from September, in one table.

The retest, the first pullback, the trap test and the bear-market calendar, each with the sample behind the number.

60%

of 45 breakouts that ran
came back to retest the level

3 of 3

recoveries sold their first
rally by 20% or more

2 of 13

breaks that held the weekly
close became traps

Educational, not financial advice. The outcomes overlap and do not add up to 100%. A retest and a pullback can both happen, and every trap in the record started as a pullback.

THE TEST

BOTH HALVES PASSED

All September this page used one line for the structure of the bear, \$82,833, the wick high of 6 May 2026 and the last step of a staircase of lower highs from the \$126,272 top. The test for a real break had two halves, a daily close above it and then a weekly close above it.

TEST	DATE	CLOSE	RESULT
Daily close above \$82,833	21 Sep 2026	\$86,587	passed
Weekly close above \$82,833	27 Sep 2026	\$84,457	passed
Last weekly close above it before that	25 Jan 2026	\$86,567	

Bitstamp BTC/USD. Weeks end on Sunday.

The break ran to \$87,374, then pulled back. On 28 September Bitcoin wicked to \$82,555, back inside the zone it broke out of. The structure changed. The rest of this guide is about what has followed a change like this.

OUTCOME ONE

THE RETEST

From The Breakout Study, every 30-day range breakout on Bitcoin since 2012. Of the 45 breakouts that ran at least 3% above the level inside a month, 27 came back to within 1% of it, 60%. The median retest came 4 days after the breakout. Two in three breakouts closed back under the level at least once inside a month.

The retest zone for this breakout is the range high to 1% above it, \$82,281 to \$83,104. The 28 September wick to \$82,555 is inside it. A retest is the most common thing a breakout does, and on its own it does not say whether the breakout worked.

OUTCOME TWO

THE FIRST REAL PULLBACK

BOTTOM	FIRST RALLY	FIRST PULLBACK	PULLBACKS OF 20%+	TYPICAL PULLBACK
2015	+211%	-40%	5 of 6	-32%
2018	+33%	-20%	2 of 5	-18%
2022	+63%	-23%	5 of 5	-21%

Hand-measured on weekly wicks (from *The First Pullback Study*). All three first pullbacks held above the bottom.

After all three of the last bottoms, the first rally was sold by 20% or more, and 12 of the 16 pullbacks on the way to new highs were 20% or more. From this rally's \$87,374 high, a 2018 sized pullback of 20% lands near \$69,700 and a 2022 sized pullback of 23% near \$67,600. A 2015 sized one of 40% lands near \$52,100, under the low.

OUTCOME THREE

THE TRAP, SPLIT BY THE WEEKLY CLOSE

BREAK	LEVEL	WEEK'S CLOSE	WEEKLY CLOSE	DAYS FROM LOW	+90D	
20 Dec 2011	\$4.40	\$4.27	lost	25	+6%	real
18 Apr 2012	\$5.04	\$5.17	held	145	+66%	real
19 Aug 2013	\$100	\$113	held	129	+364%	real
25 May 2014	\$548	\$574	held	44	-13%	TRAP
12 Nov 2014	\$418	\$390	lost	38	-48%	TRAP
02 Mar 2015	\$268	\$275	held	47	-17%	real
16 Jun 2015	\$247	\$244	lost	153	-8%	real
06 Oct 2015	\$246	\$248	held	265	+76%	real
15 Apr 2016	\$428	\$427	lost	457	+53%	real
11 Oct 2016	\$629	\$639	held	636	+40%	real
23 Feb 2019	\$4,112	\$3,731	lost	70	+94%	real
26 Oct 2019	\$8,820	\$9,557	held	315	-9%	real
23 Apr 2020	\$7,469	\$7,702	held	495	+27%	real
10 Oct 2020	\$11,183	\$11,373	held	665	+260%	real
26 Oct 2022	\$20,469	\$20,628	held	130	+9%	TRAP
12 Jan 2023	\$18,373	\$20,885	held	52	+59%	real
21 Jun 2023	\$28,452	\$30,477	held	212	-9%	real
23 Oct 2023	\$30,210	\$34,538	held	336	+26%	real
17 Apr 2026	\$76,013	\$73,825	lost	70	-17%	TRAP
19 Aug 2026	\$66,921	\$77,716	held	49		open

From The Bull Trap Study. Week's close = the Sunday close of the week of the break. Trap = a new bear-market low followed.

Of the 19 graded breaks of the last lower high inside a bear, 4 were traps. The 13 that also held the weekly close were traps 2 times, and 90 days later a median +27%. The 6 that lost the weekly close were traps 2 times, -1%. The April 2026 trap never held a weekly close. The September break did.

OUTCOME THREE

THE CASE **FOR** THE TRAP

Timing is the argument. Breaks within 90 days of the low were traps 3 of 7 times, and the September break came on day 82. Split finer, early breaks that held the weekly close were traps 1 of 3. That is too few to lean on in either direction.

From The Shallow Bear Study. The 2014, 2018 and 2022 bears had each fallen 71% to 75% by day 268 and all three went lower later, with final lows on day 410, 363 and 376. 28 September 2026 is day 357 of this bear, and the 2026 bear has only fallen 54%. The calendar says the window for a final low is still open. The depth says this bear is not like the others.

OUTCOME FOUR

STRAIGHT UP, AND THE WHOLE TABLE

None of the three recoveries went up without a 20% pullback first. The path of one clean leg to new highs is the one outcome with no example in the record.

OUTCOME	BASE RATE	SAMPLE	SOURCE
Retest of the breakout level	60%	45 breakouts	The Breakout Study
First pullback of 20% or more	3 of 3	3 recoveries	The First Pullback Study
Trap, weekly close held	2 of 13	13 breaks	The Bull Trap Study
Trap, break within 90 days of the low	3 of 7	7 breaks	The Bull Trap Study
Final bear low after day 268	3 of 3	3 bears	The Shallow Bear Study
No 20% pullback before new highs	0 of 3	3 recoveries	The First Pullback Study

The rows overlap and are not probabilities that add to one. Every sample is small, and the trap rows point in opposite directions.

LEVEL	PRICE	WHAT IT IS
Retest zone	\$82,300 to \$83,100	the range high the breakout came out of
\$82,833	\$82,833	the last lower high, now broken
20% pullback	\$69,700	2018 sized first pullback
23% pullback	\$67,600	2022 sized first pullback
The low	\$57,735	the line between a recovery and a trap

From the \$87,374 high of 21 September 2026. Levels, not targets.

THE HONEST LIMITS

WHAT THIS TABLE DOES NOT SAY

Small samples everywhere. Three recoveries, three finished bears since 2013, thirteen breaks that held a weekly close. Each row is a lean. None is a law.

The rows argue with each other. The weekly-close split says the trap is unlikely. The calendar says the window for a new low is still open. Both are printed because both are in the data.

Hindsight is built into the categories. A bottom is only a bottom once the first pullback holds, and a trap is only a trap once a new low prints. Nothing about the September break can be graded yet.

Levels move. Every pullback level is measured from the \$87,374 high. A higher high moves them up.

Data pinned 28 September 2026, 11:10am ET. Bitstamp BTC/USD daily and weekly bars, wicks for highs and lows. Built from Breakout/, Legs/, LowerHigh/, Shallower/ and Outcomes/. This is education, not financial advice.
