

BITCOIN DAILY

CAN SAYLOR BE FORCED TO SELL?

Everyone fears Strategy dumping its Bitcoin and crashing the market. Here is how its debt actually works, and what would really have to happen first.

FREE GUIDE

WHAT STRATEGY HOLDS

no company on the planet owns more Bitcoin

847,363

BITCOIN

worth about \$51 billion

the largest corporate Bitcoin holder on Earth

FIRST, WHERE THEY **ACTUALLY** STAND

Strategy is the largest corporate Bitcoin holder on Earth. It is also deep in the red.

They own **847,363 Bitcoin**, bought at an average price near **\$76,000**. Bitcoin trades far below that today.

That leaves them **down about \$13 billion on paper**, roughly 20% underwater on their stack. They have not sold at a loss, but the gap is real, and this is before any true crash.

UNDERWATER, ON PAPER

their average Bitcoin cost is above today's price. They have not sold at a loss.

AND IT GETS **WORSE FAST**

That hole is not fixed. It deepens with every leg down in Bitcoin.

THE LOWER BITCOIN GOES, THE DEEPER THE HOLE

Strategy's loss on its 847,363 Bitcoin if price keeps falling

If Bitcoin fell to **\$40,000**, their paper loss would be around **\$30 billion**. If it reached **\$35,000**, closer to **\$34 billion**.

These are not predictions. They are simple math on the coins they already hold. **The lower Bitcoin goes, the more pressure builds.**

WHY THEY CLEARED THE **RUNWAY TO SELL**

This is the part that turned the fear real.

Strategy owes a **12% dividend** to a group of investors who hold a special class of its stock. This week it **raised that rate**.

To help fund it, the board just approved selling up to **\$1.25 billion** of Bitcoin over time. That bill comes due again and again, and Bitcoin is now the piggy bank they plan to break into.

So the question is no longer "will they ever sell." They just gave themselves permission. The question is how far it goes.

SO CAN THEY BE **FORCED** TO SELL?

Here is the honest answer most panic posts get wrong.

There is **no margin call**. Strategy's debt is unsecured, and its Bitcoin is **not posted as collateral**. No lender can seize the coins or force a sale just because the price falls.

Analysts at BitMEX, Bernstein and others all land in the same place. **There is no automatic liquidation button**, no matter how far Bitcoin drops.

The doomsday "they get margin called and dump everything" story is mostly a myth. The real risk is quieter, and slower.

THE REAL TRIGGER IS SLOWER

The danger is not a sudden seizure. It is a cash-flow squeeze.

Strategy's own CEO spelled out what it would take to force a real Bitcoin sale.

Two things at the same time.

One, the stock has to trade below the value of the Bitcoin it holds. **Two**, the company has to be unable to raise fresh money from investors. If both are true, selling Bitcoin becomes the only way to pay the bills.

Behind that sits a **debt wall**. Billions in notes come due in 2027 and 2028, and the preferred dividends do not wait for Bitcoin to recover.

WE HAVE SEEN **FORCED SELLERS**

This is why the whole market watches Strategy so closely.

WE HAVE SEEN FORCED SELLERS BEFORE

2022: each blow-up dragged Bitcoin lower, all the way to \$16K

In 2022, Luna, Three Arrows, Celsius and FTX all blew up. Each one was a forced seller, dumping coins to survive, and each one dragged Bitcoin lower, all the way to **\$16,000**.

Strategy is built far better than any of them. But it is also **far bigger**. If it ever became a forced seller, it would be the largest one this market has ever faced.

THE HONEST VERDICT

Put it together and the picture is calmer than the panic, but it is not nothing.

Right now, Strategy cannot be margin called, can still raise money, and its big debt is years away. A sudden dump is unlikely.

The slow risk is real. The deeper Bitcoin falls and the longer it stays down, the harder the dividends and the debt wall press. So watch these five things.

- ☐ Is the stock trading below the value of its Bitcoin (under 1x mNAV)?
- ☐ Can it still raise money from investors, or have the markets closed?
- ☐ Is it selling more and more Bitcoin just to cover the dividends?
- ☐ How close is that 2027 to 2028 debt wall?
- ☐ Is Bitcoin making new lows that deepen the squeeze?

The more of these flash red, the more real the forced-selling risk becomes.
Right now most are still green. The job is to watch them change.
